Prepare yourself for winter weather

Consider carrying a Winter Survival Kit in your car. In an emergency, it could save your life and the lives of your passengers. Here is what you need:

**Snow & Ice Tools**
- shovel
- windshield scraper and small broom
- tow chain or rope
- road salt, sand or cat litter for traction

**Extra Warmth**
- extra hats, socks and mittens
- blankets or sleeping bag

**Automotive Assistance**
- booster cables
- emergency flares and reflectors
- fluorescent distress flag and whistle to attract attention

**Power Assistance**
- flashlight with extra batteries
- matches and small candles
- battery powered radio
- cell phone adapter to plug into lighter

**Emergency Provisions**
- water
- snack food and energy bars
- first aid kit with pocket knife
- necessary medications

Regardless of what the forecast calls for, it’s important to know about the winter weather resources available to you. In this document, you will find links to information to help you get and stay informed.

For school and business closures, tune in to news radio or TV stations and monitor district Twitter feeds:
- KOMO 1000 AM or 97.7 FM
- KING5-TV
- komonews.com/news/content/schools/
- @seapubschools
- @tacomaschools

If you find yourself stuck or stranded, stay in your car, put on your emergency flashing lights, call for help and wait until help arrives.

**Avoid Exertion**
Cold weather puts extra strain on the heart. Follow your doctor’s advice about shoveling snow or performing other hard work in the cold. If you have to do heavy outdoor chores, dress warmly and work slowly.
WINTER WEATHER RESOURCES

Prepare your organization and staff

Make sure driveways, parking lots and sidewalks are clear from snow and ice so staff and patients can safely access your facility. Create contingency planning for plowing your facility and surrounding roads. Seek out private contractors who will plow your walkways, parking lots and access roads.

- **Remind staff and patients to have emergency and back-up medical supplies and medications.** If your patients anticipate needing more supplies (e.g. oxygen, etc.), encourage them to contact the company in advance and explain that they are concerned about this season’s severe weather and that their supply may expire or not last.

- **Encourage staff and patients to pick up public transit schedules** with snow route information, and schedule in extra time to get to appointments.

- **Update your communications plan** with multiple ways to contact patients. Also, remind patients of the emergency/severe weather plan for your facility—this is especially important for dialysis or chemotherapy patients.

**Emergency Alerts by County**

It’s important to stay informed for any potential emergencies that might occur in and around your home and work. Check out the link below to find your local counties’ emergency alerting system and sign up to receive emergency updates.

**How to prolong your phone’s life in a power outage**

- First, recharge anything that can itself recharge your phone. If you have an external battery pack for your phone, top that off. If you have a laptop, do that next. Some Windows laptops can charge phones over their USB ports even when they’re asleep or shut off.

- Reduce your phone’s battery drain as much as possible. Apple and Google both have good general power-management advice; a key part in both is to check how much each app contributes to draining your phone’s battery, in which case you should force the app to start or even uninstall it.

- Turning off cellular data and then turning it on once an hour or two can further extend the phone’s runtime by ensuring that no apps can go crazy with data usage while still letting you make phone calls and send and receive text messages. In Android, open Settings and tap Data usage; in iOS, open Settings and tap Cellular.

- Both IOS and Android have low-power modes that will throttle back most of the phone. You can verify that each is enabled on either an iPhone or an Android.

**FEMA V-1014/June 2018**

Winter storms and blizzards can bring extreme cold, freezing rain, snow, ice, and high winds.

Greater risk
Can last a few hours or several days
Can knock out heat, power, and communication services

**Prepare for a Winter Storm**

If you are under a winter storm warning, find shelter right away
Stay off roads.
Use generators outside only.
Stay indoors and dress warmly.
Listen for emergency information and alerts.
Prepare for power outages.
Look for signs of hypothermia and frostbite.
Check on neighbors.

Winter storms create a higher risk of car accidents, hypothermia, frostbite, carbon monoxide poisoning, and heart attacks from overexertion.
